

## Setting up the GPS Tracker

### Introduction

This technical note will show you how to configure the GPS Tracker for standalone operation as well as reporting to the online website allowing to you later login and see where the unit has been.

### Things to know before you begin

1. You must have a working Micro size Sim Card which doesn't not have a Pin number on it.
2. If you plan to connect your GPS tracker to the website, then you need to ensure it has a data connection enabled on it.
3. Ensure you have a login to the website. Please contact your local Ness branch if you don't have one. (This is only required if you are connecting your GPS tracker to the website)

Ensure you have a Micro Sim Card and not a standard large size Sim card.

### First Time Setup

1. Ensure the battery is fully charged.
2. Power down the GPS Tracker.
3. Remove the flap seal for the Sim Card on the GPS Unit.
4. Plug the Sim card into the unit.
  - Gold side facing up towards the SOS button.
  - The corner cut off needs to be facing outwards.

5. Once the Sim Card has been inserted, plug in the flap tightly.  
(The flap you removed from step 3)

6. Power up the unit by holding in the Power button for approx 2-3 seconds.

Make sure you power up the unit outside otherwise it will not get GPS signal and the unit will not work.

## Programming the GPS tracker for standalone use only

The standalone use requires you to manually send SMS messages to the GPS tracker to find out where the unit is located.

### 1. Programming Authorized Numbers

The Authorized numbers are the numbers it will SMS and call when the buttons are pressed on the GPS tracker.

SMS Message	Function	SMS Reply
<b>A1</b>	Program phone number 1	Set mobile number 1 OK!
<b>B1</b>	Program phone number 2	Set mobile number 2 OK!
<b>C1</b>	Program phone number 3	Set mobile number 3 OK!

You need to send the SMS message from the mobile number you want to program in.

*For Example:*

*To program your mobile into phone number slot 1, SMS **A1** to the GPS tracker and wait for the SMS reply.*

SMS Message	Function	SMS Reply
<b>A0</b>	Delete phone number 1	Set mobile number 1 OK!
<b>B0</b>	Delete phone number 2	Set mobile number 2 OK!
<b>C0</b>	Delete phone number 3	Set mobile number 3 OK!

*For Example:*

*To delete phone number slot 1, SMS **A0** to the GPS tracker and wait for the SMS reply.*

### 2. Time Zone (Recommended)

This will set the time zone of the GPS Tracker.

SMS Message	Function	SMS Reply
<b>TZ+00/-00</b>	Set's the Time Zone	Set time zone OK!

*For Example:*

*To Set the time zone +10 you would send **TZ+10** to the GPS tracker and wait for the SMS reply.*

### 3. GPS Tracker Name (Optional)

This will set the name of the GPS Tracker. This name will appear in most SMS messages sent from the GPS tracker.

The name of the tracker cannot be any longer than 15 letters

SMS Message	Function	SMS Reply
<b>name1,Name Here</b>	Set's the name of the tracker	Add name OK!

*For Example:*

To set the name of the tracker to be **Demo Unit** you would send **name1,Demo Unit** to the GPS tracker and wait for the SMS reply.

SMS Message	Function	SMS Reply
<b>name0</b>	Delete the name of the tracker	Add name OK!

*For Example:*

To delete the name of the tracker send **name0** to the GPS tracker and wait for the SMS reply.

### 4. Smart Power Saving Mode (Optional)

This will set the smart power saving mode which will turn off the GPS but will keep the GSM turned on. When an incoming SMS, phone call or the unit's motion is triggered it will wake up the GPS again.

By having this turned on will save the battery power allowing extra time for the unit to be powered up.

SMS Message	Function	SMS Reply	Battery Life Standalone mode (Approx)
<b>PS1</b>	Turn on Smart Power saving	Power saving mode on!	168 Hours
<b>PS0</b>	Turn off Smart Power saving	Power saving off!	23-24 Hours

*For Example:*

To turn on this function send a SMS **PS1** to the trackers mobile number and wait for the reply.

### 5. Viewing all stored settings

You can send a SMS to view all settings that have been stored in the GPS Tracker.

SMS Message	Function	SMS Reply
<b>status</b>	Request all settings from tracker	Will reply with all the settings.

SMS Reply:

0 = Setting is turned off      1 = Setting is turned on.

*For Example:*

Send a SMS **status** to the trackers mobile number and wait for the reply with all the settings.

## Find the GPS Tracker by sending a SMS

You can send a SMS message to the GPS tracker and it will send a SMS reply telling you where the GPS tracker is.

SMS Message	Function
<b>loc</b>	Request coordinates and web link of where the GPS tracker is
<b>add</b>	Request address of the GPS Tracker. GPRS must be enabled for this to work

## Programming the GPS tracker to the website

This will allow you to send messages to the GPS trackers website allowing you to later check where the GPS tracker has been.

The Sim Card requires a data connection for this function to work.

### 1. Programming Authorized Numbers

The Authorized numbers are the numbers it will SMS and call when the buttons are pressed on the GPS tracker.

SMS Message	Function	SMS Reply
<b>A1</b>	Program phone number 1	Set mobile number 1 OK!
<b>B1</b>	Program phone number 2	Set mobile number 2 OK!
<b>C1</b>	Program phone number 3	Set mobile number 3 OK!

You need to send the SMS message from the mobile number you want to program in.

*For Example:*

*To program your mobile into phone number slot 1, SMS **A1** to the GPS tracker and wait for the SMS reply.*

### 2. Time Zone

This will set the time zone of the GPS Tracker.

SMS Message	Function	SMS Reply
<b>TZ+00/-00</b>	Set's the Time Zone	Set time zone OK!

*For Example:*

*To Set the time zone +10 you would send **TZ+10** to the GPS tracker and wait for the SMS reply.*

### 3. APN Settings

This will set the APN settings required to connect to the GPRS mobile network.

SMS Message	Function	SMS Reply
<b>S1,APN,username,password</b>	Set's the APN settings	Set APN OK! GPRS Connecting...

#### APN Setting

Replace the **APN** with your mobile networks APN setting.

*For Example:*

Mobile Network	APN
<b>Optus</b>	INTERNET
<b>Telstra</b>	TELSTRA.INTERNET

*Please double check with your network provider for the correct settings.*

#### Username & password Settings

If your mobile network requires you to use a username & password to connect to the APN then you need to enter them into these **username** and **password** fields.

If your mobile network doesn't require you to use it then you can leave these fields blank.

*For Example:*

*If you have a Optus Sim Card you would send **S1,INTERNET***

*If you have a Telstra Sim Card you would send **S1,TELSTRA.INTERNET***

*After sending the SMS message, it will send you a SMS reply.*

### 4. Get IMEI Number from Tracker

This will get the IMEI number from the GPS tracked which is required to connect to the website.

Please write down this IMEI number as you will need it for later on.

SMS Message	Function	SMS Reply
<b>version</b>	Request IMEI & version	Replies back with IMEI number

*For Example:*

*Send **version** to the GPS tracker and it will reply back with the IMEI number.*

## 5. Set Polling Time

The GPS tracker can be set to report to the website at different time intervals. Reporting to the website more often will show make it look more real-time but will flatten the battery quicker where reporting to the website not as often will make the battery last longer.

SMS Message	Function	Battery life (Approx)
TI05S	Report to the website every 5 seconds	7-8 Hours
TI30S	Report to the website every 30 seconds	19-20 Hours
TI10M	Report to the website every 10 minutes	23-24 Hours

---

Please Note: Battery life times listed above are only approx times and may be different to the actual battery life you get, after the battery has gone flat you will require to charge it again which takes approx 2-4 hours.

---

*For Example:*

*To report to the website every 30 seconds send **TI30S** to the GPS tracker and it will reply back with 'Set updating time interval OK!'*

## 6. Website settings

To connect your GPS tracker to the website you need to follow these steps.

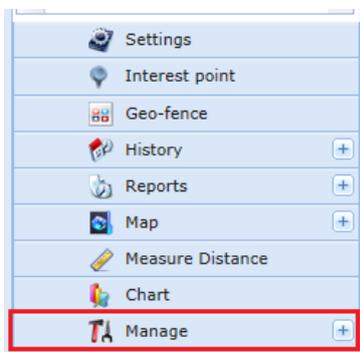

6.1. Open the smart-tracking.com website and login.

---

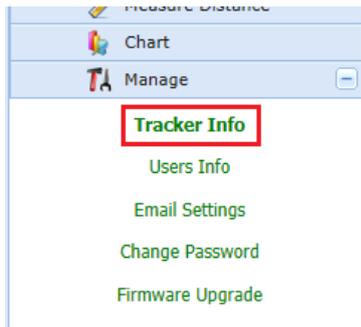

If you don't have a login then please contact SmartLink

---

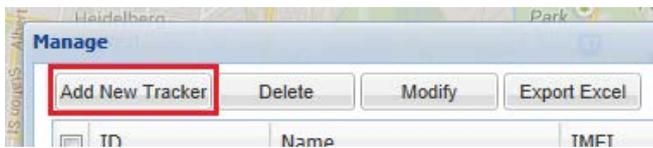

6.2. Click on **Manage** from the left menu.

6.3. Click on **Tracker Info**

6.4. Click on **Add New Tracker** from the popup window.

6.5. You now need enter in the settings for your GPS tracker.

The screenshot shows a web form titled 'Add GPS Tracker' with the following fields:

- Name: [Text input]
- Tracker Type: [Dropdown menu with 'Choose Tracker Type' selected]
- Hardware version: [Dropdown menu with 'EV07' selected]
- IMEI: [Text input]
- User ID: [Dropdown menu with 'Select a user...' selected]
- User Name: [Text input]
- Receive alarm mail: [Checkbox 'Send mail to user when alarm occurs.']
- Tracker's sim number: [Text input]
- Driver's Name: [Text input]
- Dirvers Mobile: [Text input]
- License Plate: [Text input]
- Installation time: [Text input]
- Remark: [Text area]

Buttons: Add, Cancel

**Name**

This can be anything you like. It will be used in your list of trackers.

**Tracker Type**

This can be anything you like. This is just a icon that will appear on the map to show you where your tracker is.

**Hardware Version**

This needs to be set to **EV07** from the list.

**IMEI**

This is the IMEI number from your tracker. Refer to step 4 above.

**User ID**

Ensure you select your username from the list.

The rest of the fields are optional, and if you have many GPS tracker units then you may want to fill these fields in so you can easily find them later on.

Once set click the **Add** button.

6.6. Once your GPS tracker has been added it should then be displayed in the list on the left.

6.7. The name of the tracker on the left should be in Green and the location of the tracker should appear on the map and should tell you the address of the location at the bottom of the map.

The screenshot shows the 'GPS Web Tracking Platform' interface. On the left, there is a sidebar with a list of trackers. The selected tracker, 'Tony Smartlink - smartlink', is highlighted in green. The main area displays a map of Melbourne, Australia, with a red pin indicating the location of the selected tracker. Below the map is a table with the following data:

Name	Date	Time	Latitude	Longitude	Speed	Address
Tony Smartlink	09/08/2013	19:15:43	-37.825192	145.180603	0.00	56 Norcal Road, Nunawading VIC 3131, Australia
